三方对接文档

API接口说明

请求方式

所有请求接口方式都是Post方法,使用Json方式提交.

```
{
    "amount": "500",
    "notice_url": "http://139.180.155.239:10100/player/pay/callback/28",
    "sign": "884013773c066e71d8200929d9da7b75",
    "currency": "INR",
    "merchant_order_num": "3116314112211001414",
    "channel_id": "1005",
    "mer_chant_num": "shop01"
}
```

签名算法

提交的所有参数进行Ascii码进行排序,然后末尾加上&key=xxxx,进行MD5加密,生成sgin,然后提交

```
amount=500&channel_id=1005&currency=INR&mer_chant_num=shop01&merchant_order_num=3116
314112211001414&notice_url=http://127.0.0.1/player/pay/callback/28&key=xxxx
```

接口返回数据格式(成功)

```
{
    "code": 200,      //code=200成功   -101 失败
    "msg": "ok",      //如果code=-101,这里返回错误原因
    "result": "https://xxx.com/#/?
upi=126&amount=500&order_num=Mer167834532313379&expiration=1678345503"
}
```
